

Diam: 240mm

The present Template for decoding production data allows to trace the batch of the abrasive product and its expiry date. The batch is identified by cuts made anticlockwise on the label's external diameter, as specified aside.

- reference cut (half-circle on the wheel) to be aligned with the "zero" of the Template
- cut for expiry month
- cut for expiry day
- cut for year of expiry
- cut for internal code

AFTER IDENTIFYING THE EXPIRY DATE, THE PRODUCTION DATE WILL BE OBTAINED BY SUBTRACTING 3 YEARS (EXAMPLE: EXPIRY DATE: 26/1/24, PRODUCTION DATE: 26/1/21).

Procedure for identification of the production batch:

1. Print the A3 file or the two A4 files and put them together to make an A3. N.B. deactivate the option suitable for the sheet.
2. Put the wheel in the center of the decoding drawing.
3. Align the reference cut (shape of half-circle) with the ZERO dotted line in the drawing.
4. Read the date and the internal code in correspondence with the label's cuts.
5. Calculate the production date by subtracting 3 years.

If you have boxes or packagings with the label, you will find all the information to trace the possible recalled batch.

For information about reading labels of Globe products, please download the file in the area: LIST OF RECALLED BATCHES in our website: LABEL ON THE PRODUCT BOX.
